Mr. Ziegler,

Thank you for contacting me. Dr. Golomb's piece certainly makes for interesting reading. I will forward your message with the attachments to the technical experts who have been working on this issue.

Regards,  
Dr. Rosenfarb

**Subject:** U.S. Diplomats in Cuba - Causative Event

Dr. Rosenfarb:

Dr. Beatrice Golomb, MD, PhD just completed compelling research which investigates the causative event of the Cuban diplomats' illnesses. The attached article is pending publication, but to better serve the affected patients we are raising these concerns to your attention immediately.

Brief Summary: It is urged that attention focus on pulsed radiofrequency/microwave radiation as the cause of health effects reported in U.S. diplomats in Cuba, which may aid in identifying causative devices and culpable actors, protecting future diplomats and treating past ones. This proposed cause accounts for the prominence of auditory symptoms of tinnitus and hearing loss; for each of the other symptoms reported and their protean nature; for abnormalities cited such as brain swelling, and via a phenomenon called the "Frey Effect," for the peculiar noises - chirping, ringing and buzzing - heard by some diplomats. Russia reportedly used microwave radiation on the US embassy in Moscow, in the 1950s-80s.

You are welcome to call our offices for any further questions. We are happy to help you contact  
Dr. Golomb.  
Bart
